    FUNCTION: Furin is likely to represent the ubiquitous endoprotease
activity within constitutive secretory pathways and capable of
cleavage at the RX(K/R)R consensus motif (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "The Dfur2 gene of Drosophila melanogaster: genetic organization, expression during embryogenesis, and pro-protein processing activity of its translational product Dfurin2."; DNA Cell Biol. 14:223-234(1995).

```

CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Kaa-Yaa-Arg-1-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys. Releases albumin, complement component C3 and von Willebrand factor from their

respective precursors. TISSUE SPECIFICITY: Transient expression in a subset of central

:

nervous system neurons during embryonic stages 12-13. Expression in developing tracheal tree from stage 13 to end of embryonic
                        development.
--- DEVELOPMENTAL STAGE: Expressed both maternally and zygotically.
--- SIMILARITY: Belongs to peptidase family S8. Furin subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2.

I exists only as a monomer, suggesting that propeptide cleavage affects its tertiary or quaternary structure. SUBCELLULAR LOCATION: PACB4A. I and PACB4-All are secreted. PACB4C and PACB4CS are not secreted and remain probably in zymogen form in endoplasmic reticulum. PACB4B. I and PACB4B. I are retained transcribed by through a hydrophobic cluster in their C-terminus. PACB4B might be secreted.

TISSIGE SPECIPICITY: Bach PACE4-isoform exhibits a unique
placenta, lung, skeletal muscle, kidney, pancreas, but at
comparatively higher levels in the liver. PACE4A-II is at least
expressed in placenta. PACE4B was only found in the embryonic
expressed in placenta. PACE4B was isolated. PACE4C and PACE4D
expressed in placenta. PACE4B-II is expressed in cerebellum,
placenta and pituitary. PACE4B-II is at least present in
                                                                                                                                                                                         -1- DOWAIN: The propeptide domain acts as an intramolecular chaperone assisting the folding of the zymogen within the endoplasmic reticulum. Isoform PACB4D lacks the propeptide domain.
-1- SIMILARITY: Belongs to peptidase family S8.
-1- SIMILARITY: Contains 1 PLAC domain.

Dev. Biol. 181:268-283(1997).

-I- FUNCTION: Likely to represent a widespread endoprotease activity

-i- FUNCTION: Likely to represent a widespread endoprotease activity

within the constitutive and regulated secretory pathway. Capable

of cleavage at the RX(K/R)R consensus motif. May be responsible

for the maturation of gastrointestinal peptides. May be involved

in the cellular proliferation of adrenal cortex via the activation

of growth factors.

-i- CATALYTIC ACTIVITY: Release of mature proteins from their

Isold=PGSUS SPECIFCITY: Expressed in the integrin. brain adrenal gland, anterior pitultary, thyroid, ovaries, testis and lung. Highest levels are found in the gut, duodenum, jejunum and ileum. Expression is higher in female than in male reproductive organs.
Isold=PGELOPMENTAL STAGE: First detected at E9 in highly restricted regions of the neural tube, in caudal myotomes, and at the materno-embryonic junction of the uterus. At E10, restricted expression is detected in the optic and obtic vesicles, the roof of midbrain, and trunk myotomes. By midgestation (E13-E16), expression in the developing nervous system has expanded to multiple regions including hippocampus, thalamus, hypothalamus, brain stem, and spinal cord. Expression is also detected in several peripheral organ systems, including gut, lung, adrenal and kydney primordia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. proproceins by cleavage of Arg-Xaa-Yaa-ARG-|-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys.
SUBCELLULAR LOCATION: PC5A IS SECRETED THROUGH THE REGULATED SECRETORY PATHWAY. PC5B IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH EARLY ENDOSOMES (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DOMAIN: The propeptide domain acts as an intramolecular chaperone assisting the folding of the zymogen within the endoplasmic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- DOMAIN: AC 1 and AC 2 (clusters of acidic amino acids) contain sorting information. AC 1 directs TGN localization and interacts with the TGN sorting protein PACS-1.
-!- SIMILARITY: Belongs to peptidase family S8.
-!- SIMILARITY: Contains 1 homo B/P domain.

-I- FUNCTION: Binds to WNT proteins and inhibits their activities. May be involved in mesoderm segmentation.

-I- SUBCELLULAR LOCATION: Scretced.

-I- TISSUB SPECIFICITY: During somatogenesis, expressed predominantly in unsegmented paraxial presomitic mesoderm and, to a much lesser extent, in newly segmented somites.

-I- DEVELOPMENTAL STAGE: First expressed at neurula stages.

-I- SIMILARITY: Contains 1 WIF domains.

not heart.
--- DBVELOPHENTAL STAGE: Expressed in the embryonic ventricular zone, the postnatal ependymal cells, and the choroid plexus throughout embryonic and postnatal development.
--- PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proceolytically cleaved by a furin-like convertase in the trans-Golgi network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a Cterminal fragment N(TM) and a N-terminal fragment N(TM) and a N-terminal fragment N(TM) and binding, it is cleaved by TWP-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment called notch-derived peptide containing the intracellular domain (NECD) from the membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. SUBUNIT: TERRAMER OF 2 ALPHA AND 2 BETA CHAINS LINKED BY DISULFIDE BONDS. THE ALPHA CHAINS CONTRIBUTE TO THE FORMATION OF THE LIGAND-BINDING DOWAIN, WHILE THE BETA CHAIN CARRIES THE KINASE DOWAIN. SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Belongs to the Tyr family of protein kinases. Insulin

       TALLINGS.

-1. DENELOPMENTAL STAGE: Expressed in the brain during B14 and B17.

-1. DENELOPMENTAL STAGE: Expressed in the brain during B14 and B17.

-1. PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proteolytically cleaved by a furin-like convertase in the trans-Golgin network before it reaches the plasma embrane to yield an active, ligand-accessible form. Cleavage results in a Cterminal fragment N(TM) and a N-terminal fragment N(RC). Following ligand binding, it is cleaved by TNF-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment called notch extracellular truncation (NEXT). This fragment is then cleaved by presentil in dependent gamma-secretase to release a notch-derived peptide containing the intracellular domain (NICD) from the membrane (By similarity).

-1. FTM: Phosphorylated (By similarity).

-1. SIMILARITY: Contains 3 bgf-like domains.

-1. SIMILARITY: Contains 2 Lin/Notch repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. SUBCELLULAR LOCATION: Type I membrane protein. Following proteolytical processing NICD is translocated to the nucleus. TISSUE SPECIFICITY: Highly expressed in the spleen and choroid plexus in the brain. Expressed in postnatal central nervous system (TNS) germinal zones and, in early postnatal life, within numerous cells throughout the CNS. It is more highly localized to ventricular germinal zones. Also found in the heart, liver and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NEUROGENIC LOCUS NOTCH HOMOLOG PROTEIN 2.
  development, probably in some aspect of cell specification and/or differentiation (By similarity). SUBDNIT: Heterodimer of a C-terminal fragment N(TM) and a N-terminal fragment N(EC) which are probably linked by disulfide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Receptor, Transcription, regulation, Activator; Differentiation, Developmental protein, Repeat, ANK repeat, EGF-like domain; Transmembrane, Glycoprotein; Signal; Phosphorylation.

           Thacker C., Srayko M., Rose A.M.;
"Mutational analysis of bli-4/kpc-4 reveals critical residues required for proprotein convertase function in C. elegans.";
Gene 252:15-25(2000).
-!- FUNCTION: The Kex2/subtilisin-like proteinase activity of this enzyme is required for the normal production of adult cuticle.
There is functional redundancy between the isoforms. Vital for embryonic and larval development.
-!- ALTERNATIVE PRODUCTS:
Event_Alternative_splicing; Named isoforms=5;
                                                                                                                                                                                                                                                                EMBL; L29438; AAA98750.1; ALT_FRAME.

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell or germ cell, plantipotent cell, hasmatopoietic progenitor cell, pluripotent cell, hasmatopoietic progenitor cell, pluripotent cell, hasmatopoietic progenitor cell, pluripotent cell or totipotent cell. The hasmatopoietic progenitor cell, pluripotent cell or totipotent cell. The hasmatopoietic progenitor cell, pluripotent cell or totipotent cell. The hasmatopoietic progenitor cell, pluripotent cell or totipotent cell. The hasmatopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as agraft for the bone marrow cramplantation or cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, hasmana, hasmana, acquired immune deficiency syndrome (AIDS), thalassaemia, hasmalytic anaemia due to enzyme defect, congenital anaemia cult as sickle cell anaemia daucher such as mucopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases uch as parkinson's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiency concernia, immune deficiencies and diseorders such as severe combined immunodeficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (SCID)) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from mouse
                                                                                                                                                    Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzheimer's
                                                                                                                                                                                                                     disease, cancer, rheumatoid arthritis, osteoporosis

Claim 23; Page 80; 96pp; English.

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding complement of the polymucleotide, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide, a m (expression) vector comprising the SCR-1 polymucleotide, a host cell genetically engineered to contain the SCR-1 polymucleotide in the host controls expression of the polymucleotide in the host cell, that controls expression of the polymucleotide in the host cell, preparation of the SCR-1 polymucleotide (the polypeptide having an expression product of the SCR-1 polymucleotide (the polypeptide having an equivity to support proliferation or survival of haematopoietic stem cell, with a proviso that C-terminal as sequence does not comprise the as sequence appearing as ABA44313), an isolated solypeptide

I lacking any 10 consecutive ass from ABA4430, an isolated polypeptide

SCR-1 polypeptide with stem cell growth factor activity and isolated polypeptide with stem cell growth factor activity having at least an as sequence appearing as ABO4428 and ABO4429, a culture medium comprising the SCR-1 polypeptide to maintain survival of or promote proliferation of a stem cell or germ cell, an anti-SCR 1 antibody, a nucleic acid array comprising the SCR-1 polymucleotide or a unique segment of the SCR-1 polymucleotide, a stromal cell genetically

```
engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell and an implant comprising a cell genetically engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell. The SCR-1 polypeptide and for maintaining survival of or promoting proliferation of a stem cell, a germ cell, a germ cell, a germ cell, a newatopoietic stem cell or promoting proliferation of a stem cell. The SCR-1 polypeptide is useful for promoting wound healing. The human haematopoietic stem cell or a hematopoietic progenitor cell culture using the SCR-1 polypeptide can replace as a graft for the conventional bone marrow transplantation or cord blood transplantation of haematopoietic stem cells can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     employed as a therapy for treating diseases such as chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Andrich syndrome, AIDS, etc., thalsasaemia, haemolytic anaemia due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and morphogenesis, including tissue specific stem cell growth, epithelial cell growth, and regulation, ovarian follicle development, promoting nerve cell growth, sustaining neuronal populations, cartilage remodeling, bone growth and immunosuppression. The present sequence is a mouse SCR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 LPPVLERIGMKOIGVCLSSCPSGYYGTRYPDINKCTKCKVDCDYCPNKNPCTKCKSGFYL 120

```
The present sequence is the protein sequence for human thrombospondin-30. Thrombospondin-30 protein and coding sequence are useful in the diagnosis and treatment of malignant tumour. haemopathy, HIV infection, immunological diseases and various inflammation diseases. In addition thrombospondin-30 protein may be used for screening mimics, agonists, antagonists or inhibitors, or for use in peptide fingerprinting identification. The thrombospondin-30 coding sequence may be used as primers for nucleic acid amplification reaction or as probes for hybridisation reaction, or in producing gene chips or microarrays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hemantopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding polypeptides with cytokine-like activities, useful

Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.

Claim 28; Page 226-227; 232pp; English.

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, perm line stem cell, embryonic stem cell, hematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell growth centralike proteins can replace as a graft for the home marrow transplantation or cord blood transplantation for treating a variety of diseases uch as immunodeficiency syndrome, chronic granulomatous disease, duplicated immunodeficiency syndrome, agammaglobulinaemia, wiskott-Aldrich syndrome, acquired immune deficiency syndrome (ALDS), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia cuch as mucopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as Parkinson's disease, Alzheimer's are useful for treating diseases such as parkinson's disease. Alzheimer's are useful for treating diseases such as Parkinson's disease. Alzheimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency (SCID)) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell or germ cell which is preferably primordial germ cell, garm this stem cell embryonic stem cell, promotic stem cell, propentior cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cell intense cell immunodeficiency syndrome, chronic granulomatous diseases uch as immunodeficiency syndrome, chronic granulomatous (Miskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS). Thalassaemia, haemalytic anaemia due to enzyme defect, congenital anaemia cuch as sickhe cell anaemia daucher's disease, lypoisomal storage diseases such as mucopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tunnours. Proteins of the invention care useful for treating diseases such as Parkinson's disease, Alzhaimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as multiple sclerosis, systemic lupus arythematosus, rheumatoid arthritis, and autoimmune plumonary chlupus arythematosus, rheumatoid arthritis, and autoimmune plumonary chlupus arythematosus, rheumatoid arthritis, and autoimmune plumonary chlupus arythematosus, theumatoid arthritis, and autoimmune plumonary chlupus arythematosus, rheumatoid arthritis, and autoimmune plumonary chlupus arythematosus, rheumatoid arthritis, and autoimmune plumonary che are also useful in gene them tell growth factor-like protein from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 LPPALERIGHKOLGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNFCTKCKSGFYL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and polymucleotides. The stem cell growth factor-like polypeptides and polymucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerative diseases like Alzheimer's disease. They are also useful for generating new tissues and organs that may aid patients in need of transplanted tissues. The polymucleotides are useful as hybridisation probes, oligomers or primers for PCR, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QHPSAKGKGNLCPPTSETRTCIVQRKKCSKGERGKKGRERRRKKTANKEERKETSSSSDSK 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HIGKCLDSCPEGLEANNHTMECVSIVHCEASEWSPWSPCMKKGKTCGFKRGTETRVRDIL 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New stem cell growth factor-like polypeptides and polynucleotides, useful for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chromosome and gene mapping, in recombinantly producing protein, in generating antisense DNA or RNA, in diagnostics as expressed sequence tags for identifying expressed genes, and for inducing immune response. The polypeptides are useful for generating antibodies that specifically bind the polypeptide, as molecular weight markers, and as a food supplement (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the polypeptides or polynucleotides are useful for the diagnosis, treatment or prevention of cancers, and other immunological disorders. The current sequence represents a human clone 1 thrombospondin protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to new stem cell growth factor-like polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunostimulant; vulnerary; hematopoietic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; hematopoietic progenitor cell; stromal cell; hlub; thalassaemia; bone marrow transplantation; cord blood transplantation; chronic granulomatous disease; duplicated immunodeficiency syndrome; agammaglobulinaemia; Wiskott-Aldrich syndrome; hemolyfic anaemia; congenital anaemia; sicklaemia; Gaucher's disease; morphogenesis; epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or its mature protein portion, or ragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polynucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ΰ

Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells. N-PSDB; ACH04323, ACH04324. WPI; 2003-625403/59

Claim 23; Fig 3; 96pp; English.

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polynucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polynucleotide), an (expression) vector comprising the SCR-1 polynucleotide, a host cell genetically enginered to contain the SCR-1 polynucleotide in the host cell, that controls expression of the polynucleotide in the host cell, that controls expression of the polynucleotide in the host cell, corpus the SCR-1 polymeptide, a polypeptide in the host cell, corpus or expression product of the SCR-1 polynucleotide (the polypeptide having an expression product of the SCR-1 polynucleotide (the polypeptide having an expression product of the SCR-1 polynucleotide (the polypeptide having an extrivity to support proliferation or survival of haematopoietic stem cell, such as sequence does not comprise the as sequence appearing as ABO44413), and isolated SCR-1 polypeptide with stem cell growth factor activity having at least an as sequence appearing as ABO44428 and ABO44429, a culture medium comprising the SCR-1 polypeptide or a unique segment of the SCR-1 polymentiacion of a stem cell or maintain survival of or promote proliferation of a stem cell or comprise or a surface, a stromal cell array or proport or autivity and a provise the cell or maintain survival of or promote proliferation or a surface or a unique segment of the SCR-1 polymentale. engineered to express the SCR-1 polypeptide to support proliferation c survival of a stem cell or germ cell and an implant comprising a cell genetically engineered to express the SCR-1 polypeptide to support WO200177169-A2

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or cell growth factor-like proteins are useful for supporting proliferation or cell, germ cell, germ cell, embryonic stem cell, parmatopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cell. The haematopoietic progenitor cell cultured using stem cell growth cells and immunodeficiency syndrome, chronic granulomatous diseases such as immunodeficiency syndrome, chronic granulomatous (Miskot-Aldrich syndrome, acquired immune deficiency syndrome (AlbS), thalassaemia, haemalytic anaemia due to enzyme defect, congenital anaemia culture as sickle cell anaemia due to enzyme defect, congenital anaemia cells as much as millians sorting diseases unch as mater diseases, lysosomal storage chaesase and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency (SCID) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequence is stem cell growth factor-like protein from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62
                                                                                                                                                                                                                                                                                                                                                                                                         Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HIRLISWLFIILNFWEYIGSQNASRGRRQRRWHPWVSQGCQGGGATCSDYNGCLSCKPRL

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide), an (expression) vector comprising the SCR-1 polymucleotide, an operative association with a regulatory sequence or strain of the SCR-1 polymucleotide in the host cell, that controls expression of the SCR-1 polymucleotide in the host cell, caparation of the SCR-1 polymucleotide (the polypeptide having an activity to support proliferation or survival of haematopoietic stem cell or hematopoietic stem cell or hematopoietic stem cell or hematopoietic progenitor cell, with a proviso that C-terminal as sequence does not comprise the as sequence appearing as ABO44433), an
                                                                                                                                                                                                                                                                                                              immunostimulant; vulnerary; hematopoletic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; hematopoletic progenitor cell; stromal cell; halbs; thalassaemia; bone marrow transplantation; cord blood transplantation; chronic granulomatous disease; duplicated immunodeficiency syndrome; agammaglobulinaemia; Miskott-Aldrich syndrome; haemolytic anaemia; congenital anaemia; sicklaemia; Gaucher's disease; morphogenesis; epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor
                                                                                                                                                                                                                                                                                                 Stem cell growth factor-like protein; antianemic; anti-HIV; SCR-1;

isolated SCR-1 polypeptide with stem cell growth factor activity and lacking any 10 consecutive aas from ABO4430, an isolated polypeptide with stem cell jarowth factor activity having at least an as sequence appearing as ABO44428 and ABO44430, a culture medium comprising the SCR-1 polypeptide to maintain survival of or promote proliferation of a stem cell, an anti-SCR autionody, a nucleic acid array.

CC comprising the SCR-1 polymuclecide or a unique segment of the SCR-1 polymuclectide or a unique segment of the SCR-1 polymptide to support proliferation or survival of a stem cell and an implant comprising a cell control survival of a stem cell or germ cell. The SCR-1 polymptide to support the SCR-1 polymptide is useful for promoting proliferation or survival of a stem cell or germ cell. The SCR-1 polymptide is useful for promoting wound a stem cell, a germ cell, a harmatopoietic stem cell or a haematopoietic stem cell or a haematopoietic stem cell or a haematopoietic stem cell or correspondent or cord blood transplantation. The transplantation of haematopoietic stem cells can be graft for the conventional bone marrow transplantation or cord blood diseases duplicated immunodeficiency syndrome, agammaglobulinemia, due to enzyme defect, congenital anaemia such as sicklaemia, daucher's disease etc. the SCR-1 polypeptide is useful for cell growth and cepulation, ovarian follicle development, promoting nor properior cell growth, sustaining meuronal populations, cartilage remodelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63 PFALERICMKOIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNFCTKCKSGPYLH 122

The polynucleotides are also believed to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 LPPALERIGMKOIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNPCTKCKSGFYL 120

The patent discloses novel stem cell growth factor-like proteins and solymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, paramatopoietic stem cell, mematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic stem cell. pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth factor. Ike proteins can replace as a graff for the bone marrow cell can can replace as a graff for the bone marrow cell can can cord blood transplantation for treating a variety of disease such as immunodeficiency syndrome, choose and diseases, lysosomal storage diseases, uplainated an anemia degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency (SCID) and autoimmune disorders such as multiple sclerolas, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is human SCR-1 related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MHLRLISCFFIILNFMEYIGSQNASRGRRQRRMHPNVSQCQGGCATCSDYNGCLSCKPR 60
osteopathic; immunodeficiency syndrome; chronic granulomatous disease; duplicated immunodeficiency syndrome; wiskott-Aldrich syndrome; AIDS; acquired immunodeficiency syndrome; wiskott-Aldrich syndrome; AIDS; acquired immuno deficiency syndrome; agammaglobulinaemia; thalassaemia; daucher; sissease; lysosomal storage disease; mucopolysaccharidosis; adrenal white matter degeneration; anaemia; neurodegenerative disease; Parkinson's disease; thrombocytopaenia; SCID; severe combined immunodeficiency; immune disorder; autocimmune disorder; multiple sclerosis; systemic lupus erythematosus; rheumatoid arthitis; supporting factor for the proliferation of stem cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6; Gaps

corper mammalian proteins. (I) shills, where the process is subscining, treating or ameliorating a medical condition, especially immunological treating or ameliorating a medical condition, especially immunological treatment or prevention of tumours. (I) eshibites activity relating to angiogenesis, cytokine, cell prowth factor activity and activin or inhibin-related activities. (I) can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or genetic disorders. (I) induces the proliferation of neural cells and central and peripheral nervous system diseases and neuropathies, such as Alzheimer's Parkinson's disease, Huntington's disease, amyotrophic central and peripheral nervous system diseases and neuropathies, such as Alzheimer's Parkinson's disease, Huntington's disease, amyotrophic activity, regulation of haematopolesis and is useful for treating myeloid cell disorders, platelet disorders such as thrombocytopaenia and for resemeration of bone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders or regeneration and treatment of lung or liver fibrosis, reperfusion injury or various tissues, various immune deficiencies and disorders including cerver combined immunodeficiency (SCID), bacterial or tungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, cecombinant protein, as markers for tissues in which the corresponding protein is preferentially expensed and in gene therapy. The invention relates to new stem cell growth factor-like polypeptides and polymucleotides. The stem cell growth factor-like polypeptides and polymucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerative diseases like Alzheimer's CC disease. They are also useful for generating new tissues and organs that CC may aid patients in need of transplanted tissues. The polymclectides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in complimantly producing protein, in companionately producing protein, in companionately producing protein, in the polypeptides are useful for generating antibodies that specifically bind the polypeptides are useful for generating antibodies that specifically conditionately protein or amino acid supplement, and as a food cultrappendent (e.g. procein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the current cor prevention of cancers, and other immunological disorders. The current cor prevention of cancers, and other immunological disorders. The current cor prevention of annears a human secreted protein clone da_288_6
                                                                                                                                                                                                                                                                                                                                             New stem cell growth factor-like polypeptides and polynucleotides, useful for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 LPPVLERIGMKQIGVCLSSCPSGYYGTRYPDINKCTKCKVDCDTCPNKNPCTKCKSGPYL 120
